Alexa, start “scene name” in “room name”

For example, Alexa, start “morning” in “living room”

Sync Data:

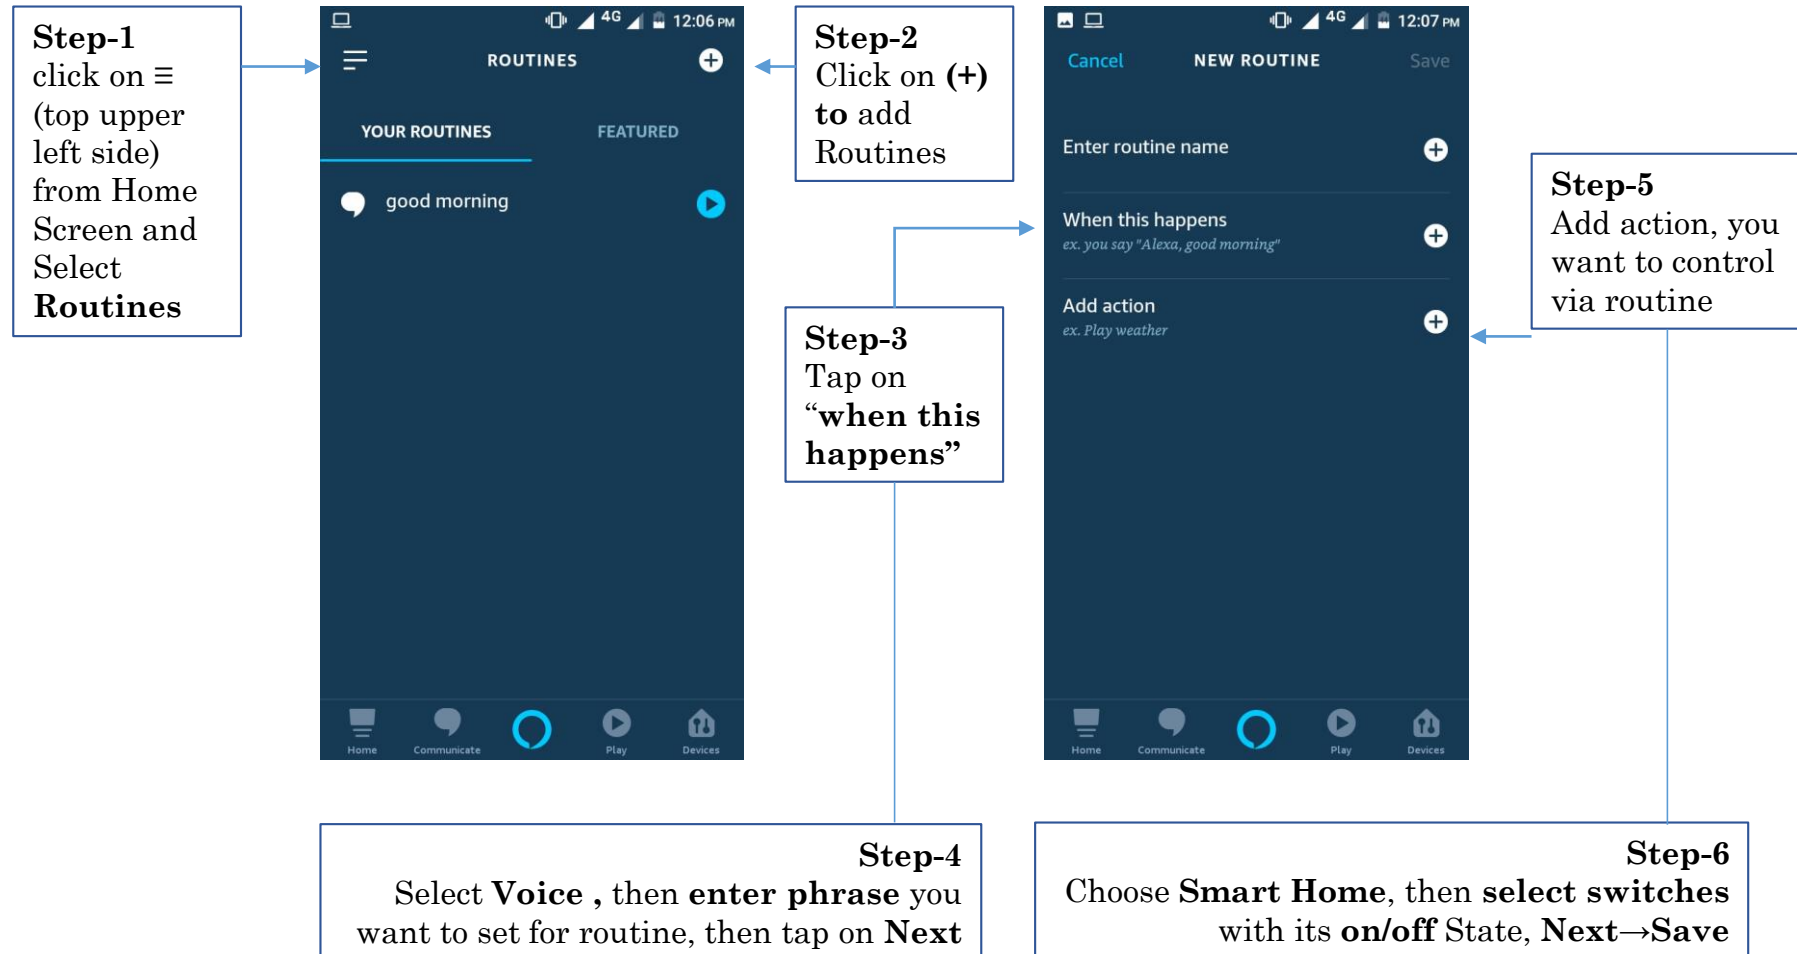

If any changes done in application of whitelion then update it by this command.

Alexa, discover devices

Routines:

You can set Routines as you want

Repeat **Step-5** and **Step-6** for next switches

HELP & SUPPORT

- 1) Wi-Fi chip doesn't list in Alexa app even though it is completely working with whitelion Application.
 - Whenever setting an Alexa, make sure you have completed process as above (from set up to router then discovered)
- 2) In an existing account of Alexa if new device add it is not listed after discovered Alexa.
 - If by only discovered device it is not listed then do remove each switch from Alexa application then do entire process of set-up.
- 3) Changed I'd by deregister account then re-register by another I'd after setup but Wi-Fi chip not recognized by Alexa
 - Disabled skill and re-enabled it
 - You required the whole set-up for new I'd
- 4) Out of connected one if we removed one chips and then re-added to router but then after it is not recognized by Alexa
 - Make sure chip gets IP from router if possible, try to reboot router.
 - Removed chip and re-attached to same port.
 - Reboot power supply
 - Re-setup of Alexa (By disabled skill and then re-enabled it)
 - Re-setup of Alexa (Reconnect to router)
- 5) After successful connection to Alexa it is showing it is not available
 - Make sure chip gets IP from router if possible, try to reboot router.
 - Removed chip and re-attached to same port.
 - Reboot power supply

Thank You
